ARTEVO with REHAU profiles

The new premium composite system sets standards in design, size, productivity and sustainability, provides superior thermal insulation and meets even the most demanding requirements.

- ✓ Revolutionary composite material
- ✓ First-class design
- ✓ Thermal insulation at the top level
- ✓ Maximum window size with clean lines
- ✓ High sound attenuation
- ✓ LowE profile technology option
- ✓ More sustainability

TECHNICAL INFORMATION

Building depth	80 mm
Number of chambers with Z leaf	7
Number of chambers with flat-faced sash	8
Glazing width with Z sash	56 mm
Glazing width with flat-faced sash	72 mm
Light width	117 mm
Thermal insulation with triple glazing 0,5	Uw up to 0,73
Thermal insulation with triple glazing 0.5 and LowE	Uw up to 0,68
Mattex color decors	10 foils
Spray RAL colors	YES

Material

Composite High-Tech material RAU-FIPRO X, reinforced with glass fibers, gives ARTEVO windows long-term durability, noise protection and increases home security.

Design

ARTEVO combines aesthetics with functionality, offering clean lines of a flush-fitting sash with an aluminum appearance. Exclusive mattex colors, the option of a white, brown or anthracite carrier and thoughtful accessories raise the windows to a whole new level.

Energy efficiency

ARTEVO offers excellent thermal insulation, which contributes to the reduction of energy costs. The window is always equipped with a central seal.

Natural light

ARTEVO uses strong triple glazing that offers excellent characteristics. Thanks to the narrow profiles, it also allows for the expansion of the glazed area, which not only improves the aesthetics, but also maximizes the amount of natural light in the interior.

Copyright REHAU Industries SE & Co

ARTEVO by REHAU brings art and evolution. It is a composite revolutionary premium window system that excels in design, element size of up to 2.8 meters, productivity and sustainability. It offers a clean design with an aluminum look and maximizes the use of natural light thanks to narrow profiles. The composite material, known from the automotive and aerospace industries for its high stability and durability, finds another application here. ARTEVO is a sustainable solution using recycled materials and contributes to the circular economy with annual savings of up to seven times the weight of the Eiffel Tower. The system provides excellent thermal insulation and meets passive building standards with the REHAU LowE technology. The 80 mm platform makes the production process more efficient and allows for design flexibility. ARTEVO combines exceptional design with high performance, making window professionals market leaders.

ARTEVO MAX

The ARTEVO max variant with the innovative REHAU LowE profile technology achieves the ARTEVO passive building standard with Uf values of up to 0,82 W/(m²K).

ARTEVO

Most ARTEVO elements do not require steel reinforcement, which prevents the formation of thermal bridges and allows for achieving Uf values of up to 0,98 W/(m²K).
